Amendments to the Specification:
Please replace paragraph 0035 with the following replacement paragraph:

[0001]   Any number of drives and associated computer storage media may be
attached to the computer 110, and provide storage of computer readable instructions, data
structures, program modules and other data for the computer 110. For example, a hard disk
drive may store an operating system, application programs, other program modules and
program data. A user may enter commands and information into the computer 110 through
input devices such as a keyboard and pointing device, commonly referred to as a mouse,
trackball or touch pad. Other input devices may include a microphone, joystick, game pad,
satellite dish, scanner, or the like. These and other input devices are often connected to the
processing unit 120 through a user input interface that is coupled to the system bus 121, but
may be connected by other interface and bus structures, such as a parallel port, game port or a
universal serial bus (USB). <u>An output device such as display 150 may also be coupled to
system bus 121, as illustrated.</u>
